

CDISC Library: Integrating and Surfacing 360 Content

Presented by Sam Hume, DSc
VP, Data Science

16 October 2019

Setting the Scene

High level overview that shows our initial efforts to integrate CDISC 360 content across the project work stream to generate outputs that can be surfaced for inspection

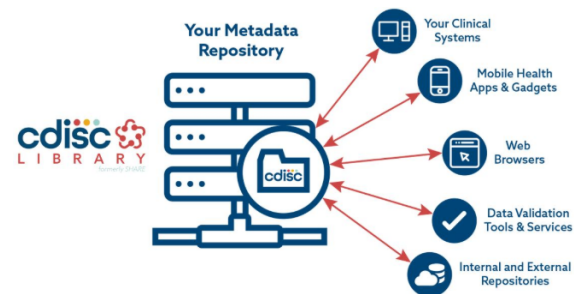

CDISC 360 and the CDISC Library

Goals:

- Increase study implementation automation
- Reduce study implementation variability

Building Tools using the CDISC Library

Create additional concept-based metadata published via the CDISC Library to support software tools that will provide additional study implementation automation while reducing the variability across CDISC standards implementations

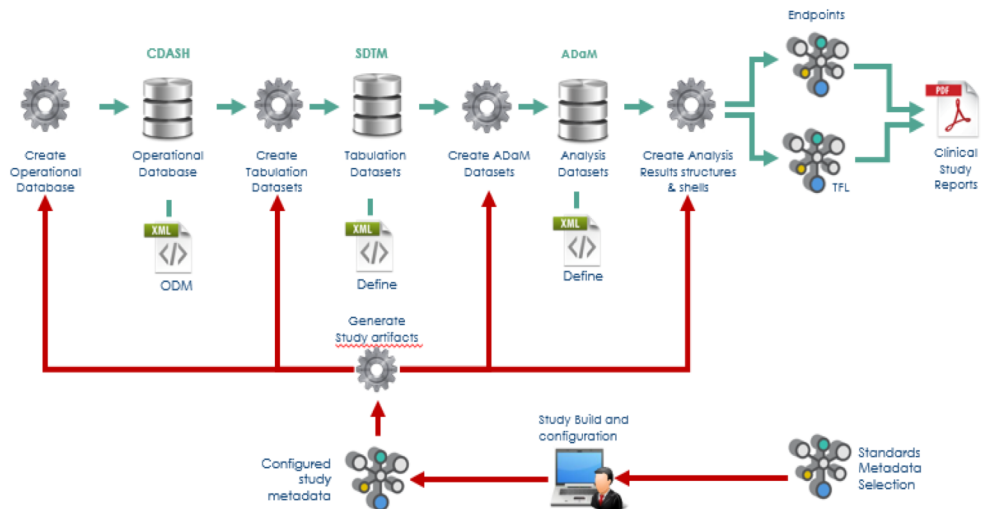

Integration: Data Flow Across the Workstreams

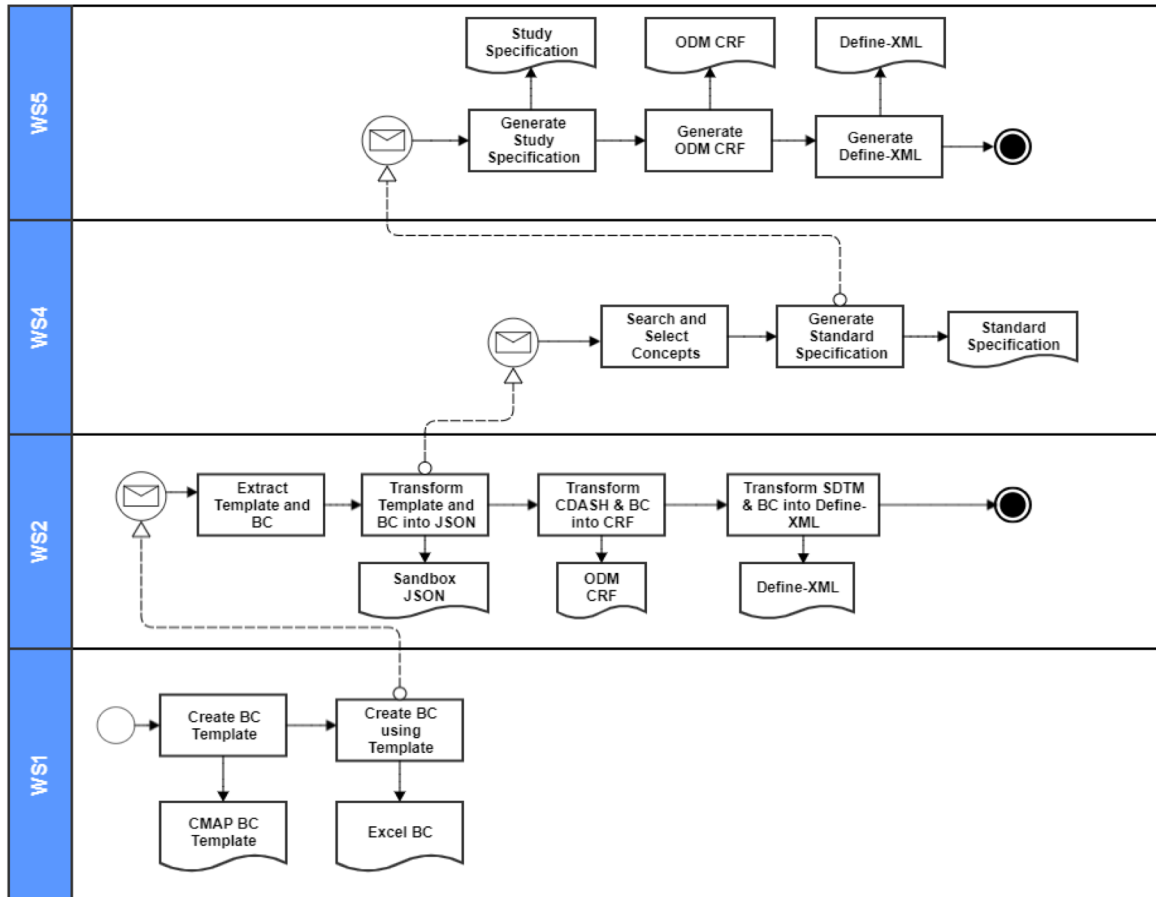

- Uses Biomedical Concepts to generate a CRF and Define-XML
- Uses BCs and CDISC Library to create a simple study specification
- Uses automation to test the metadata content
- Shows small subset of the work done in CDISC 360 to date

Demo Constraints:

- Focused on use cases 1 & 2
- Focused on work streams 1-5
- Focused on VS domain
- Not fully end-to-end

CDISC 360 US Interchange Demo

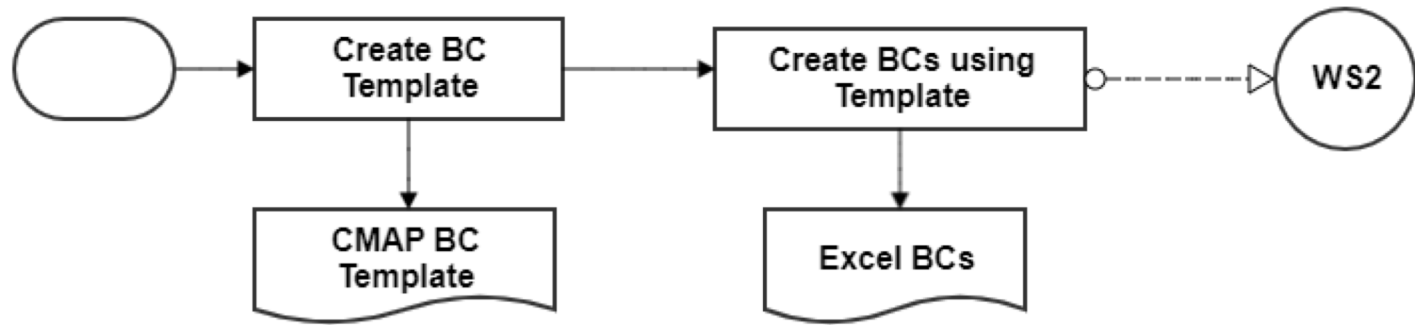

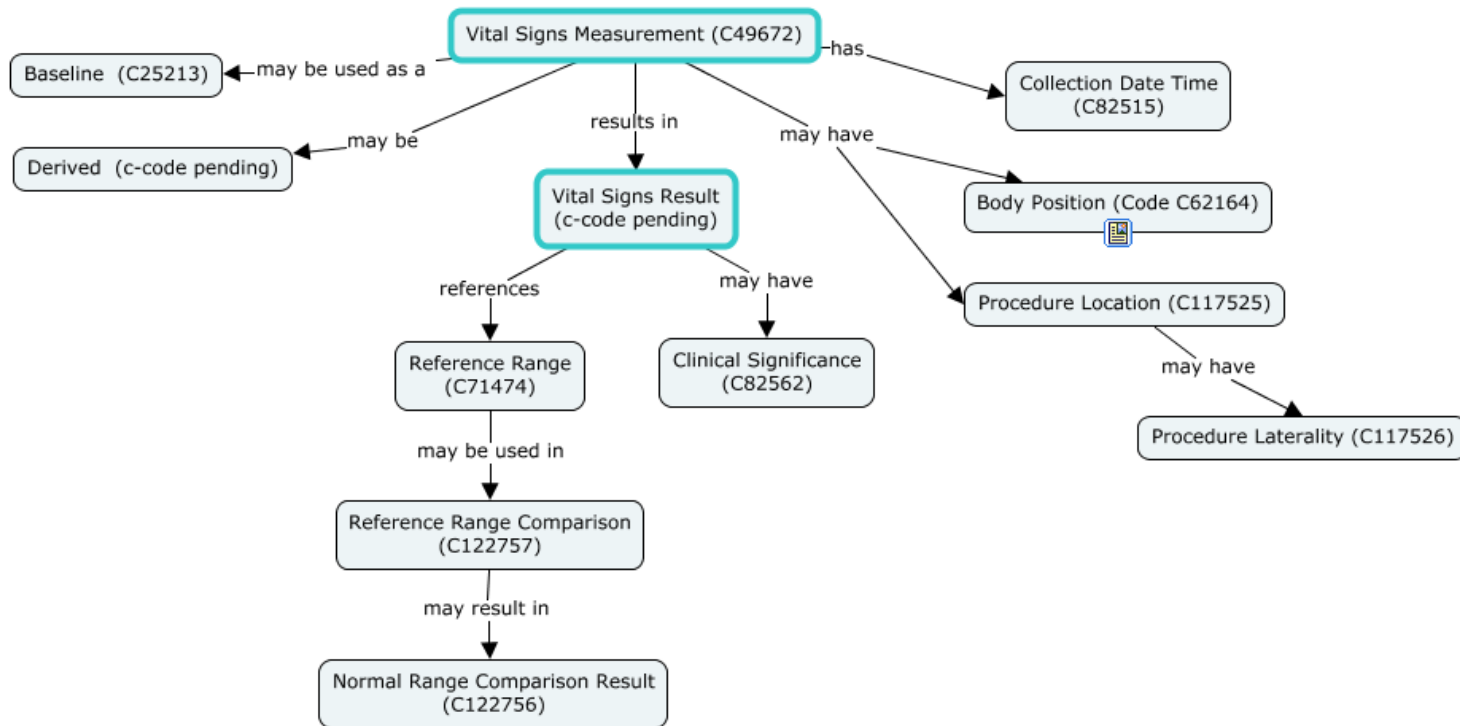

Enhance Standards: Workstream 1

Creating Templates and Biomedical Concepts to Enhance our Standards Metadata

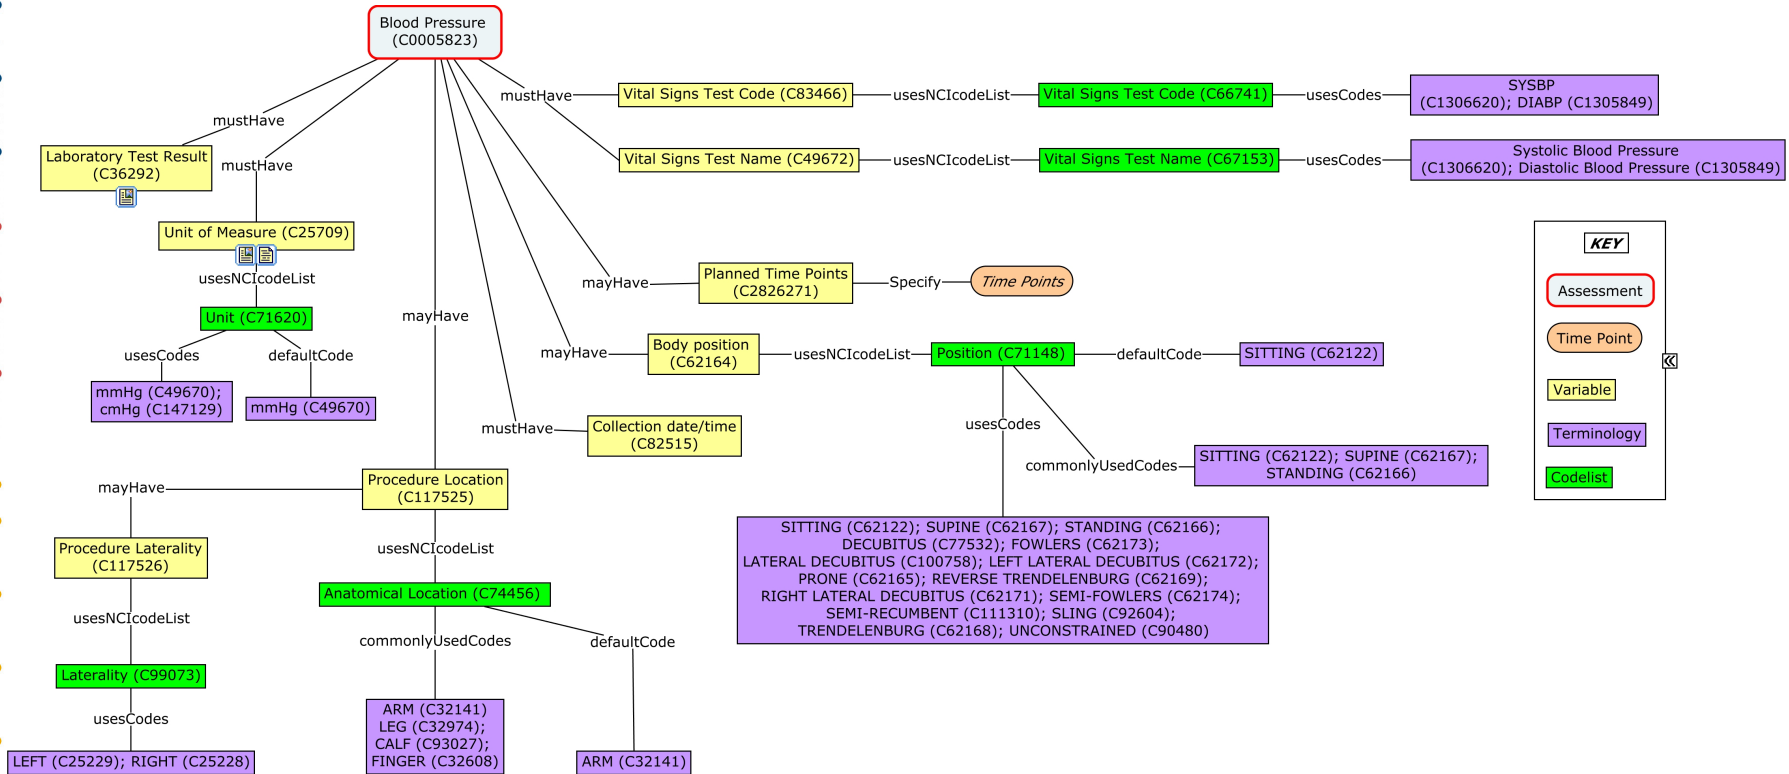

Enhance Standards (Workstream 1): Creating Biomedical Concepts (BCs)

Vital Signs Biomedical Concept Template

Blood Pressure Concept Map

Creating BCs in Excel

#	C-code	Biomedical Concept	Definition	Test Code	Test Name	Unit	Unit Type	Anatomic Location	Position	Result Type
1	Pending	Diastolic Blood Pressure	The blood pressure after the contraction of the heart while the chambers of the heart refill with blood. (NCI)	DIABP (C25299)	Diastolic Blood Pressure (C25299)	mmHg (C49670)	TBD	N/A	DECUBITUS (C77532); FOWLERS (C62173); LATERAL DECUBITUS (C100758); LEFT LATERAL DECUBITUS (C62172); PRONE (C62165); REVERSE TRENDELENBURG (C62169); RIGHT LATERAL DECUBITUS (C62171); SEMI-FOWLERS (C62174); SEMI-RECUMBENT (C111310); SITTING (C62122); SLING (C92604); STANDING (C62166); SUPINE (C62167); TRENDELENBURG (C62168); UNCONSTRAINED (C90480)	Numeric
2	Pending	Systolic Blood Pressure	The blood pressure during the contraction of the left ventricle of the heart. (NCI)	SYSBP (C25298)	Systolic Blood Pressure (C25298)	mmHg (C49670)	TBD	N/A	DECUBITUS (C77532); FOWLERS (C62173); LATERAL DECUBITUS (C100758); LEFT LATERAL DECUBITUS (C62172); PRONE (C62165); REVERSE TRENDELENBURG (C62169); RIGHT LATERAL DECUBITUS	Numeric

What do Biomedical Concepts Do?

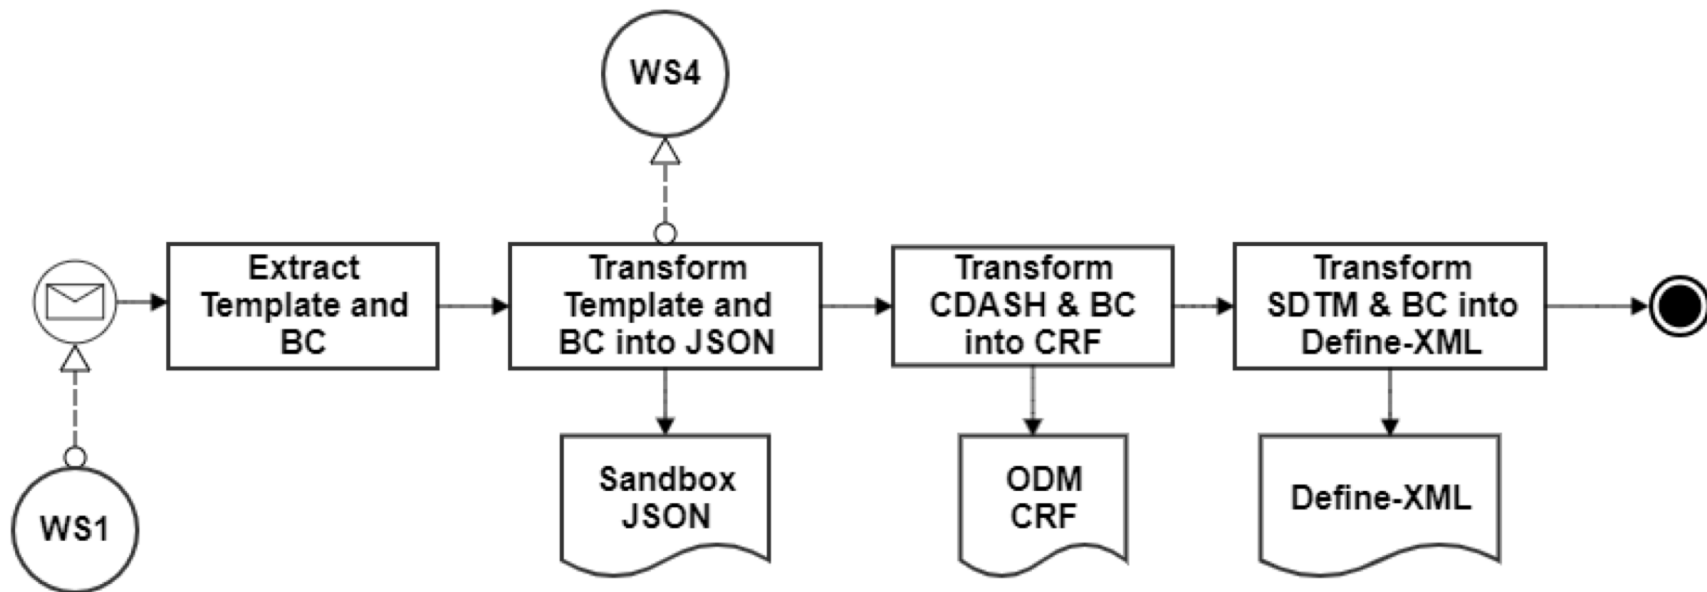

- A biomedical concept is a unit of knowledge created by a unique combination of characteristics (ISO 11179)
 - Independent of a standards implementation
- Include an identifier, name, label, and definition
- Specify valid units
- Specify the needed qualifiers
- Specify valid controlled terminology subsets

Publish Standards: Workstream 2

Transforming Biomedical Concepts into Machine-readable Metadata
and Publishing them via the CDISC Library

Publish Standards (Workstream 2): Transforming BCs into Machine-readable Metadata

Generating the CRF and Define-XML are for testing purposes

What does the CDISC Library Do?

- Provides access to CDISC standards metadata
- Machine-readable metadata as linked data
- Provides access to the CDISC controlled terminology
- Ultimately will provide access to the foundational standards as well as the CDISC 360 content via the API

```
{
  "ordinal": "16",
  "name": "VSORRES",
  "label": "Vital Signs Result",
  "definition": "Result of the vital signs measurement as originally received or collected.",

      "type": "Root Data Element"
    }
  }
}
```

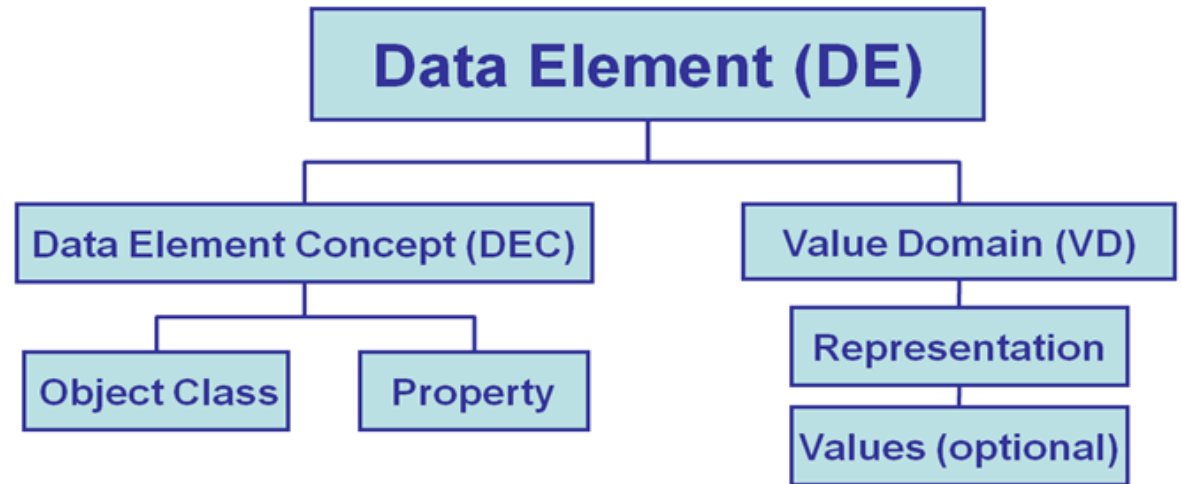

Generating the Vitals Signs CRF: What's Missing?

- What vital signs tests are included
- What units apply per tests
- What qualifiers are required for a specific test
- Valid controlled terminology subsets
- Common vs repeating content
- Specific (ODM) datatypes
- Length and SignificantDigits

Question: Where is the Height Variable?

- Height is a VS TEST, but not a variable
- You might think of Height as a virtual variable
- It needs to be defined as a Data Element for use as a field in CDASH, or a variable in SDTM
- Biomedical Concepts help us to create a Height data element

Transforming Biomedical Concepts into JSON

```
"designation": "Height",  
"conceptId": "X25347",  
"label": "Height Biomedical Concept",  
"definition": "The vertical measurement or distance from the base...",  
"testCode": "HEIGHT",  
"testConceptId": "C25347",  
"testName": "Height",  
"loincCode": "8302-2",  
"resultType": "Numeric",  
"unitList": ["cm (C49668)", "in (C48500)", "mm (C28251)"],  
"standardUnit": "cm (C49668)",
```

Standards and Biomedical Concepts Work Together

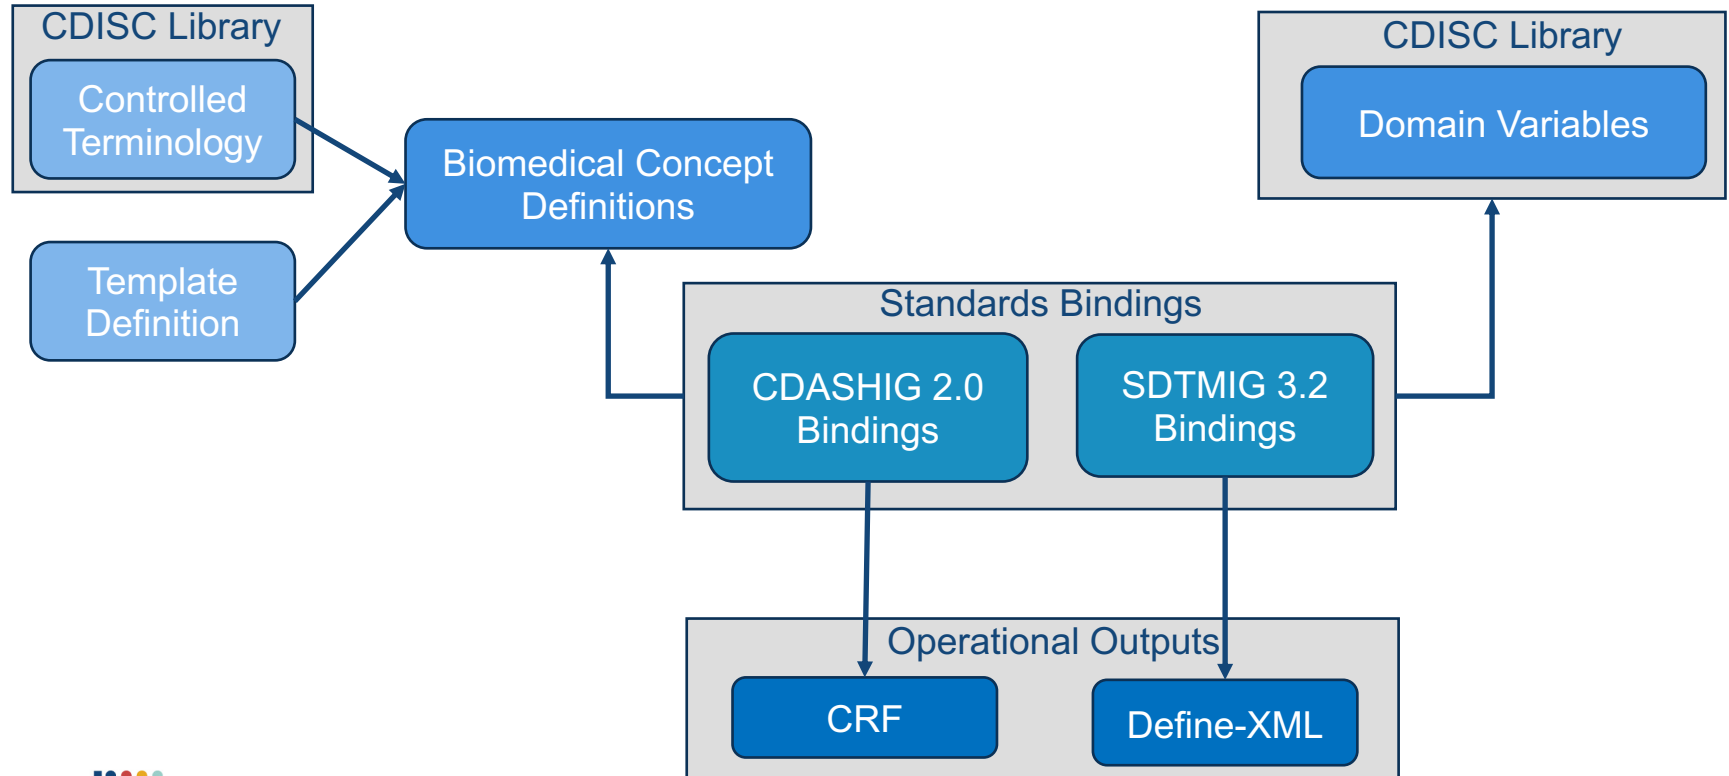

VS Domain from CDISC Library

Applying Biomedical Concepts

Applying Biomedical Concepts: Binding to Standards

We want to select a set of vital signs concepts

CDISC360  

Diabetes - Type 2

- 1 Disease Area
✓ Diabetes - Type 2
- 2 Study Type
✓ Safety
- 3 Domains
✓ Vital Signs
- 4 **Concepts**
- 5 Data Collection
- 6 Confirmation

Please select vital signs concepts

<p>Height</p> <p>The vertical measurement or distance from the base to the top of an object, the vertical dimension of extension.</p>	<p>Weight</p> <p>The vertical force exerted by a mass as a result of gravity.</p>	<p>Heart rate</p> <p>The number of heartbeats per unit of time, usually expressed as beats per minute.</p>
<p>Temperature</p> <p>The property of a body or region of space that determines whether or not there will be a net flow of heat into it or out of it from a neighboring body or region and...</p>	<p>Blood Pressure</p> <p>The pressure of the circulating blood against the walls of the blood vessels.</p>	<p>Respiratory Rate</p> <p>The rate of breathing (inhalation and exhalation) measured within a unit time, usually expressed as breaths per minute.</p>
<p>Oxygen Saturation</p> <p>A measurement of the oxygen-hemoglobin saturation of a volume of blood.</p>	<p>Hip Circumference</p> <p>The distance around an individual's pelvic area or hips.</p>	<p>Body Fat Measurement</p> <p>A measurement of the total fat mass within the subject's body.</p>
<p>Body Frame Size</p> <p>The categorization of a person's body frame into small, medium and large based on the measurement of wrist circumference or the breadth of the elbow.</p>

Conclusion

What does the demonstration tell us?

Key Points

- The new CDISC 360 metadata enables implementers to more completely generate metadata artifacts
- The metadata can be used by different technology implementations
- Future sprints will incrementally change the metadata used in the demo
- Future sprints will expand on the scope of the current demonstration
- Ultimately, the new metadata will be available in the CDISC Library

Session 3, Track B: CDISC 360 Use Cases - Industry Perspectives

- Use Case 1: DEFINE - End to Start Standards Specification
- Use Case 2: BUILD - Study Configuration & Artifact Creation
- Use Case 3: EXECUTE - Automated Data Processing
- Pacific Ballroom 14-15
 - 14:00 – 15:30

Thank You!
